

FalseRoute — System Architecture

Autonomous intrusion-response control plane. AI advises; deterministic application policy decides; every response effect is simulated and recorded.

The demo records response intent and outcome. It does not redirect traffic, deploy decoys, or modify Cloud Armor.

Trust boundary: model output is validated at the adapter edge and can never authorize an action. Provenance is carried end to end — OBSERVED · DERIVED · INFERRED · UNAVAILABLE.

Out of scope by design: no customer traffic proxying, no arbitrary model-generated commands, no model-chosen cloud resources or credentials, no exactly-once delivery claim.
